Annual Pole Attachment Rate and Attachment Connection Fee _ Revised

(Effective on January 1, 2022)

In compliance with the CPS Energy Pole Attachment Standards, this disclosure statement outlines the formula, inputs, and calculation used to derive the annual Attachment Rate and the annual Wireless Installation Rate and is based on data that ties to audited annual financial reports for Fiscal Year Ending (FYE) 2022¹.

CPS Energy calculates the annual Attachment Rate as provided by Section 54.204(c) of the Texas Utilities Code, which requires application of the pole attachment rate formula adopted by the Federal Communications Commission² under 47 U.S.C. § 224(e), where:

$$\text{Attachment Rate} = (\text{Space Factor}) \times (\text{Cost})$$

$$\text{Space Factor} = \frac{(\text{Space Occupied}) + [(\frac{2}{3} \times \text{Unusable Space}) \div (\text{Number of Attaching Entities})]}{(\text{Average Pole Height})}$$

$$\text{Cost} = (0.4448) \times (\text{Net Cost of a Bare Pole}) \times (\text{Carrying Charge Rate})$$

Totaling **\$16.44 per 1.0 Foot of Attachment Space**

¹ CPS Energy's FYE 2022 covers the period February 1, 2021 to January 31, 2022.

² Federal Communications Commission Order 15-151, effective March 4, 2016

³ Per FCC Order 16-33, dated 5/25/2016. In this Order, the FCC reduces the default authorized Rate of Return (ROR) by 25 basis points beginning on July 1, 2016 and each July 1, thereafter until the ROR is 9.75%. CPS Energy uses the FCC default ROR since state law does not prescribe a ROR for CPS Energy.

Derived Inputs:

Average Height of Pole 44.0 Feet *Calculated from Pole Records*

Unusable Space

Defined as: 18.0' + (10% of Average Pole Height) + 2.0'

Per PUCT Order in Docket #36633

Unusable Space = 18.0' + [(10%)(44.0')] + 2.0 = 24.4'

Derived Inputs (Continued):

Carrying Charge Rate

Defined as:

Per PUCT Order in Docket #36633

Administration Expense + Maintenance Expense + Depreciation Expense + Taxes + Cost of Capital

Administration Expense = $\frac{\text{A/C 920-932 Total Admin \& General (Electric Plant Only)}}{\text{Net Electric Plant In-Service}}$

$$= \frac{\$155,131,745.40}{\$7,264,282,491.58}$$

$$= 2.1355\%$$

Maintenance Expense = $\frac{\text{A/C 593 Maintenance of OH Lines + FCC 17-154}}{(\text{Total Investment in A/C 364, 365, 369}) - (\text{Total Accum Depr A/C 364, 365, 369})}$

$$= \frac{\$40,263,023.28 - \$354,344.17}{(\$1,495,952,907.39 - \$692,536,598.53)}$$

$$= 4.8748\%$$

Depreciation Expense = Depreciation Rate x [(Total Investment A/C 364) ÷ (Net Investment in Poles)]

$$= 0.0430 \times [(\$670,305,024.40) \div (\$670,305,024.40 - \$251,737,857.49)]$$

$$= 6.8861\%$$

Taxes = $\frac{\text{A/C 408 Payroll \& Other Taxes (Electric Only)}}{\text{Net Electric Plant In-Service}}$

$$= \frac{\$7,164,970.33}{\$13,239,733,117.43 - \$5,975,450,625.85}$$

$$= 0.0986\%$$

Cost of Capital = 9.7500% *(From Direct Inputs)*

Therefore, using the derived inputs from above:

Carrying Charge Rate = Administration Expense + Maintenance Expense + Depreciation Expense +
Taxes + Cost of Capital

$$= 2.1355\% + 4.8748\% + 6.8861\% + 0.0986\% + 9.7500\%$$

$$= \underline{\underline{23.7450\%}}$$

Rate Calculation:

$$\text{Attachment Rate} = (\text{Space Factor}) \times (\text{Cost})$$

$$\text{Space Factor} = \frac{(\text{Space Occupied}) + [(\frac{2}{3} \times \text{Unusable Space}) \div (\text{Number of Attaching Entities})]}{(\text{Average Pole Height})}$$

and

$$\text{Cost} = (0.4448) \times (\text{Net Cost of a Bare Pole}) \times (\text{Carrying Charge Rate})$$

Therefore, using both the direct and derived inputs from above:

$$\text{Space Factor} = \frac{(1) + [(\frac{2}{3} \times 24.4) \div (3.04)]}{(44.0)} = 14.43\%$$

and

$$\text{Cost} = (0.4448) \times (\$1,078.33) \times (23.7450\%) = \$113.89$$

Resulting in:

$$\text{Attachment Rate} = (14.43\%) \times (\$113.89) = \underline{\underline{\$16.44 \text{ per 1.0 foot of Attachment Space}}}$$
